Technology has transformed how people manage tasks and collaborate.

Traditional methods such as paper notes and spreadsheets are now less common.

Modern task management tools:

- Provide real-time updates
- Improve collaboration
- Are accessible across multiple devices

However, choosing the right tool is challenging due to differences in features and complexity.

This study compares popular task management tools based on practical use in an academic setting.

There are numerous task management tools available, each offering different features and pricing models.

This creates confusion when selecting the most suitable tool.

It becomes difficult to identify:

- The most efficient tool
- The best value for money
- The tool suited for specific needs

Objective

- Evaluate the effectiveness of task management tools in real-life use
- Analyze how well these tools support planning, tracking, and collaboration
- Measure time efficiency for new users
- Assess teamwork features through task distribution
- Examine integration with other software and overall performance
- Compare the performance of free vs. paid versions

Abstract

This study compares four popular task management tools:

- Trello
- Asana
- ClickUp
- Microsoft To Do

The tools were tested in a real academic environment by performing:

- Task creation
- Task tracking
- Task completion

Evaluation was based on:

- Usability
- Collaboration features
- Performance
- Cost

Key Finding: Each tool is suitable for different users.

The following aspects were evaluated:

- Ease of learning
- Task management efficiency
- Collaboration support
- Clarity and organization
- System performance

Tools were selected based on:

- Popularity among students
- Availability of free versions

Selected tools:

Trello and Microsoft To Do → Simple tools

Asana and ClickUp → Advanced tools

All tools:

- Tested using web versions
- Only free features used

Same academic scenario was used for all tools.

Tasks included:

- Research work
- Content writing
- PPT creation
- Assignment submission

Each tool was used separately to manage tasks.

Fair testing ensured:

- Same number of tasks
- Same testing time
- Only free features used

Limitations:

- Single-user testing
- Short duration
- Advanced features not tested

Case Study – Student Productivity

Tools tested for:

- Personal assignments
- Group work
- Time management

Findings:

- Simple tools → better for individuals
- Advanced tools → better for teams

Results

Feature	Trello	Asana	ClickUp	Microsoft To Do
Usability	Very easy	Moderate	Complex	Very simple
Interface	Kanban	Structured	Customizable	Simple lists
Features	Basic	Advanced	Feature-rich	Basic
Collaboration	Basic	Strong	Advanced	Limited
Integration	Good	Strong	Extensive	Limited
Performance	Fast	Stable	Slightly heavy	Very fast
Customization	Limited	Moderate	High	Very limited
Cost	Free + Paid	Free + Paid	Free + Paid	Free

Comparative Analysis of Tools

Challenges

- Steep learning curve in advanced tools
- Frequent notifications
- Limited integrations in some tools
- Dependence on stable internet

Future Scope

- Include more tools
- Test with more users
- Long-term usage analysis
- Real-world professional testing

- Each tool has unique strengths
- Simple tools are best for beginners
- Advanced tools provide more features but need time to learn

Final Insight:

The best tool depends on user needs, team size, and experience level.

Thank You
